JPMC SERVICES  
- KYC UAT -  
COLT

Project 1 :

COLT (Client onboarding lifecycle tool) :

This is a web based application of JPMC. It deals with how the customer gets onboarded directly into JPMC bank by overcoming list of various processes and procedures. It is interconnected with Party central, CDD (Customer Due Diligence) application. Here customer information and customer details are fetched from GCRD and to party central and in turn it is transmitted to COLT first and then from here it flows into CDD. Confidential details are fetched into COLT directly from Party central and from GCRD and once if the KYC finalisation milestone is completed for the customer then he will be partially onboarded into JPMC via COLT. Then details of customer from COLT will be flowing into CDD application and through various internal panels and procedures of CDD, Customer will be evaluated in each panels of ADD, PDD, LDD. Based on the results obtained CDD application may onboard customer successfully.

JPMC SERVICES  
- KYC UAT - CDD

Project 2 :

CDD (Customer Due Diligence) :

KYC UAT - CDD is a web based application of JPMC. This KYC application deals with how the customer gets onboarded directly into JPMC bank by overcoming list of processes and procedures. It has various internal and third party applications on which this CDD system is interconnected and deals with. Customer details and information comes from Party central and it is interconnected with GCRD and from there to CDD. CDD has various internal panels and customer has to be evaluated in each panels like Account due Diligence, Specialized due Diligence, Depends on which country he is associated with and based on list of products he owns. Depends on the Risk he hold before onboarded. Screening test has to be done in Screening panel. Likewise various levels of testing has to be carried out and check whether customer can be onboarded or not.

ROBERT BOSCH  
ENGINEERING  
AND BUSINESS  
SOLUTIONS -  
ESI WEB

Project 3 :  
Bosch ESI [tronic 2.0] is one of the leading diagnostic software products for the Maintenance, Diagnosis and repair of Vehicles. It is an inhouse built Automobile web based application. The Software includes basic vehicle data for more than 150 brands plus all important diagnostic functions, maintenance documentation and diagrams, a search function for faults and their corresponding repair instructions, and experienced based (EBR) information. All of this information makes ESI [tronic] 2.0 reliable, fast and easy to use.

ROBERT BOSCH  
ENGINEERING  
AND BUSINESS  
SOLUTIONS -  
ESI ONLINE

Project 4 :  
Bosch ESI tronic online is one of the leading diagnostic software products for the Maintenance, Diagnosis and repair of Vehicles. It is an inhouse built Automobile Standalone application. Both ESIweb and ESI online functional wise they are same and the difference is mainly that ESI web works through internet. But ESI online works without internet. ESI Online gets updated itself when Wifi gets connected automatically. The software includes basic vehicle data for more than 150 brands plus all important diagnostic functions, maintenance documentation and diagrams, a search function for faults and their corresponding repair instructions, and experienced based (EBR) information. All of this information makes ESI [tronic] 2.0 reliable, fast and easy to use.

AGILE HEALTH  
TECHNOLOGIES  
- DENTAL  
CAMPAIGN  
APPLICATION

Project 5 :  
Henry Schein Veterinary solution, USA  
Dental Campaign Application deals with sending communication to bring back their elapsed clients with their pets for Dental treatment.
